

## POTENTIAL AREAS FOR BEE HABITAT

- Existing Habitat

Habitat that is untilled and unused. Add suitable plants and nest sites. Keep free from pesticides.

- Peripheral Areas

Field edges, road edges, hedge rows. Leave untilled. Plant native plants. Keep free from pesticides.

- Poor Quality or Poorly Irrigated Land

Some of the best places for growing plants for foragers are the worst places for growing crops.

- Orchards and Perennial Crops

Plant cover crops such as vetch, clover and yarrow in among fruit trees and grape vines.

- Farm Gardens

Flowers grown for their beauty provide pollen and nectar for pollinators
